

Formal Review Request Template

Requester: John Dimento

Date: 10/07/2026

Reviewer: Hiram

Approx. review duration: 1.00 Hour

Choose **one primary review method**:

Code / Software Review

Code Quality Review

Inspect the code for issues such as readability, modularity, maintainability, efficiency, and appropriate programming practices.

White-Box / Edge-Case Testing

Inspect the internal logic and systematically test branches, boundary conditions, exceptions, or adversarial inputs.

Black-Box / Functional Testing

Develop test cases from the expected requirements or behavior and determine whether the software produces the expected results.

Performance / Runtime Testing

Systematically evaluate whether the software meets relevant runtime or performance expectations.

Usability Review

- **Task-Based Usability Testing**

Give the reviewer/user specific tasks to complete while you observe what they do, where they succeed, and where they encounter problems. A think-aloud protocol may be used.

- **Heuristic / Guidelines Evaluation**

Systematically inspect the interface using identified usability principles, heuristics, or design guidelines.

- **Prototype Usability Testing**

Have users complete defined tasks using a wireframe, prototype, or partially implemented interface.

Design Review

- **Architecture / Conceptual Design Review**

Evaluate whether architecture and major design decisions align with project requirements and constraints.

- **Preliminary Design / UML Review**

Evaluate proposed system structure, diagrams, component relationships, interfaces, or other design artifacts.

- **Security Design Review**

Evaluate relevant authentication flows, trust boundaries, data protection, error handling, or other security-related design decisions.

Other

- **Other review method:**

Explain what the reviewer will evaluate and why this method is appropriate for your work:

The reviewer will use the website to try to reproduce bugs I found during my first-impression review. Black-box testing is appropriate because they will compare expected and actual behavior without examining the source code.

Review Request Details

- 1) What specifically should the reviewer examine or interact with?

The reviewer should interact with the website features where I found issues, and my first impressions report which lists these.

-
- 2) What question do you want this review to help answer?

Were my findings correct?

Are there any issues with my findings?

Could you reproduce?

Examples:

- Does this implementation correctly handle boundary and error cases?
- Can a new user complete the checkout task without assistance?
- Does this architecture satisfy our project's stated requirements?

-
- 3) What should the reviewer focus on?

Focus on reproducing the reported bugs and noting any differences between their results and my observations.

-
- 4) What should the reviewer *not* evaluate during this review?

The reviewer should not evaluate unrelated website features or source code. This review focuses on verifying my reported findings.

Examples:

- Do not evaluate visual polish or mobile responsiveness (for a usability test evaluating navigation and task completion)
- Do not evaluate the database layer or unfinished API integration (for a code review focusing on the authentication module)

-
- 5) What should the reviewer use to judge the work?

Expected software behavior, First impression review

Examples include expected software behavior, project requirements, coding best practices, usability heuristics, or design constraints.

Reviewer Section

1) Briefly describe what you actually did during the review.

Examples include executing defined test cases, inspecting particular code paths, observing a user completing defined tasks, or systematically examining a design against specified criteria.

I conducted black-box functional testing of the OblyssPro website using the provided demo account. I reviewed the requester's First- Impressions & UX Report and attempted to reproduce the reported usability issues by interacting with the website.

I tested the Marketing Dashboard by clicking the lead total and lead-source chart, checked where revenue by marketing source could be accessed, and hovered over marketing abbreviations to look for explanations. I also examined the sidebar navigation after refreshing the website and reviewed the Lead Desk to determine whether conversion-related terminology was explained.

I compared my observations against the original report and documented which findings I could reproduce, along with any differences.

2) What portions of the artifact did you evaluate?

I evaluated the following portions of the OblyssPro website:

- **Marketing Dashboard:** Lead totals, lead-source chart, marketing metrics, and terminology.
- **Reports → Lead Sources:** Availability and location of revenue information by marketing source.
- **Sidebar Navigation:** Default expansion behavior and overall navigation organization.
- **Lead Desk → Overview:** Conversion-related terminology, conversion rate, and lead funnel.

I limited the review to the areas relevant to the requester's reported findings and did not inspect the source code.

3) Provide or link to relevant evidence such as test cases, screenshots, notes, annotated code, observations, or other review artifacts.

Evidence collected during the review includes:

- **Screenshot 1 — Marketing Dashboard:** Shows the lead total (87), lead-source chart, and marketing metrics. Clicking the lead total and source bars did not open the corresponding records.

- **Screenshot 2 — Reports → Lead Sources:** Shows the "Sold Value by Source" chart, confirming that revenue information is available in Reports rather than directly on the Marketing Dashboard.

- **Screenshot 3 — Lead Desk Overview:** Shows the conversion-rate description and lead funnel, providing additional context for the term "Converted."

- **Sidebar recording:** Documents the navigation interface, including its expanded sections.

Recording Link: [sidebar.mp4](#)

Additional observations: Hovering over GMB, CTR, and CPC did not produce explanatory tooltips. The sidebar sections were expanded by default after refreshing the website.

Findings

Strengths:

- The Marketing Dashboard presents important metrics, such as leads, advertising spending, and cost per lead, in clearly separated cards. This makes the information relatively easy to scan.
- The Reports section provides a revenue breakdown by lead source, while the Lead Desk includes a useful explanation of conversion rate and a funnel showing different lead statuses.

Issues / Defects:

Description of Issue	Severity (Low/Med/High)	Evidence / Example	Suggestions
Lead totals and source bars do not	Low	Clicking the 87 lead total and lead-	Provide drill-down links to

provide access to underlying records.		source bars produced no visible response.	the related inquiries.
Revenue by marketing source is not directly accessible from the Marketing Dashboard.	Low	Revenue breakdown was found under Reports → Lead Sources.	Add a direct link from Marketing to the relevant report.
Marketing abbreviations lack hover explanations.	Low	Hovering over GMB, CTR, and CPC displayed no tooltips.	Add definitions or expand abbreviations on first use.
Sidebar navigation is overcrowded.	Low	Navigation sections were expanded by default, displaying numerous options.	Collapse secondary sections by default.
Conversion terminology could be explained more consistently.	Low	Lead Desk explains conversion rate as leads receiving appointments, but the meaning is not equally clear throughout the interface.	Use consistent terminology and provide contextual definitions.

Requester Follow-Up

1) How will you address the feedback? If you decide **not** to, briefly explain why.
