

Formal Review Request Template

Requester: ____ Alvin
Mawlue____
Reviewer: __ Vedaant
Patel_____

Date: ____ Oct 6
2026____
Approx. review duration:
____ 20_____

Choose **one primary review method**:

Code / Software Review

- ☐ **Code Quality Review**
Inspect the code for issues such as readability, modularity, maintainability, efficiency, and appropriate programming practices.
- ☐ **White-Box / Edge-Case Testing**
Inspect the internal logic and systematically test branches, boundary conditions, exceptions, or adversarial inputs.
- ☐ **Black-Box / Functional Testing**
Develop test cases from the expected requirements or behavior and determine whether the software produces the expected results.
- ☐ **Performance / Runtime Testing**
Systematically evaluate whether the software meets relevant runtime or performance expectations.

Usability Review

- ☐ **Task-Based Usability Testing**
Give the reviewer/user specific tasks to complete while you observe what they do, where they succeed, and where they encounter problems. A think-aloud protocol may be used.

- ☐ **Heuristic / Guidelines Evaluation**
Systematically inspect the interface using identified usability principles, heuristics, or design guidelines.
- ☐ **Prototype Usability Testing**
Have users complete defined tasks using a wireframe, prototype, or partially implemented interface.

Design Review

- ☒ **Architecture / Conceptual Design Review**
~~Evaluate whether architecture and major design decisions align with project requirements and constraints.~~
- ☐ **Preliminary Design / UML Review**
Evaluate proposed system structure, diagrams, component relationships, interfaces, or other design artifacts.
- ☐ **Security Design Review**
Evaluate relevant authentication flows, trust boundaries, data protection, error handling, or other security-related design decisions.

Other

- ☐ **Other review method:**

Explain what the reviewer will evaluate and why this method is appropriate for your work:

Read the uml diagram and evaluate the logic flow. We need to know if it is designed well and easy to understand

Review Request Details

1) What specifically should the reviewer examine or interact with?

The relationship of the diagram

2) What question do you want this review to help answer?

Examples:

- Does this implementation correctly handle boundary and error cases?
- Can a new user complete the checkout task without assistance?
- Does this architecture satisfy our project's stated requirements?

Does the current diagram meet every specification required for this project

3) What should the reviewer focus on?

Design constraints and usability

4) What should the reviewer *not* evaluate during this review?

Examples:

- Do not evaluate visual polish or mobile responsiveness (for a usability test evaluating navigation and task completion)
- Do not evaluate the database layer or unfinished API integration (for a code review focusing on the authentication module)

Do not the evaluate the admin logical flow

5) What should the reviewer use to judge the work?

Examples include expected software behavior, project requirements, coding best practices, usability heuristics, or design constraints.

Design constraints

Reviewer Section

1) Briefly describe what you actually did during the review.

I reviewed the UML diagram by examining the overall structure, class relationships, and logic flow. I compared the diagram to the project requirements to make sure the design was reasonable and within the scope of the project.

2) What portions of the artifact did you evaluate?

I evaluated the overall UML diagram, including the relationships between classes, the organization of the components, and how the different parts of the system connect.

3) Provide or link to relevant evidence such as test cases, screenshots, notes, annotated code, observations, or other review artifacts.

I reviewed the submitted UML diagram and made notes based on the class relationships, overall structure, and alignment with the project requirements.

Findings

Strengths:

- The UML diagram clearly represents the major components of the system and how they are related.
- The relationships and overall logic appear to fit the scope and requirements of the project.

Issues / Defects:

Description of Issue	Severity (Low/Med/High)	Evidence / Example	Suggestions
The diagram is very large and contains many relationships crossing between different sections,	Low	Several relationship lines run across the center of the diagram between classes in different	Consider grouping closely related classes or creating

which can make individual relationships harder to follow.		sections.	separate diagrams for major parts of the system if the diagram continues to grow.
Some classes and services are relatively far apart from the components they interact with.	Low	For example, some of the service/repository components are located toward the right side while the models they interact with are elsewhere in the diagram	Consider positioning related components closer together where possible to make the overall flow easier to trace.

Requester Follow-Up

1) How will you address the feedback? If you decide **not** to, briefly explain why.
